

The
Indistinguishable
Art of the
Waiting Room: A
Zine

DR (W) 3 M D

Every waiting room you will ever enter, whether it's a hospital or a family doctor's office, will have a piece of art that will always seem slightly familiar.

Whether it's a landscape painting depicting mountains or a flowing lake, or an artwork of a peaceful little village, the images are near to impossible to recollect due to their absolute...sameness.

Despite its prevalence in our day-to-day lives, waiting room art is oddly hard to research, search engines show paintings of waiting rooms but despite its instant recognisability, the images themselves are difficult to locate.

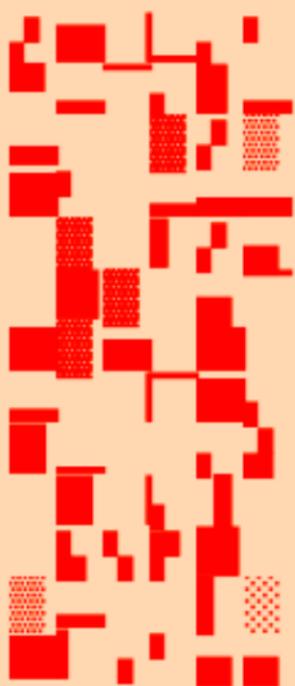

Figure 1

The art of the waiting room is employed to calm or reassure the patient in idyllic scenes of tranquility, but somehow reminds the patient where they are. We know we're in the waiting room, because where else are these images? We always see them lurking in these spaces, but where else do they reside?

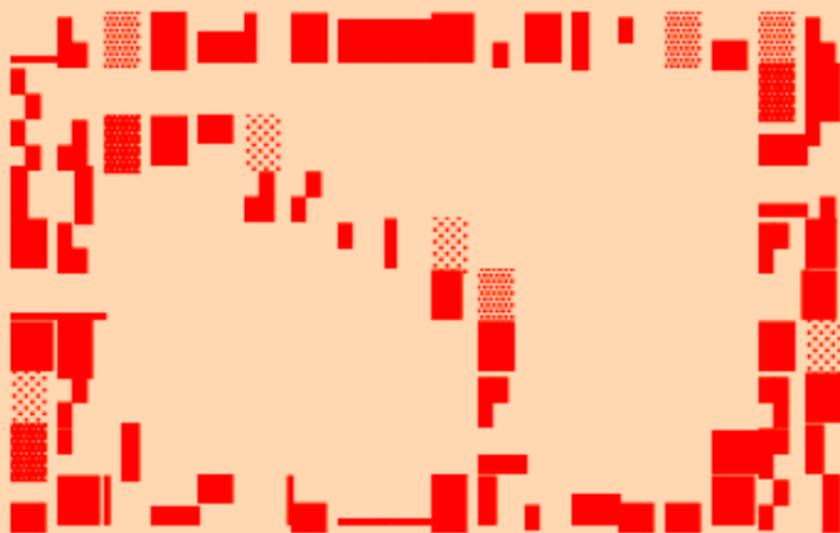

Do artists paint for this space? And what is this anomaly in a world of information so easily accessed online, why can we not find these things. And why are they all the same???

Christine H.
Medical Waiting Room

I decided to make my own AI generated art to show how easy it is to create these scenes and make them unrecognisable from the real thing.
