

Appropriate Technology is a grassroots world-wide movement for autonomy in Technology. The creation of autonomous servers is part of this broader movement.

The concept of -not only an autonomous- but also a feminist server combines the interest for technological autonomy with feminist urgencies. It is an ongoing effort, emerging from the need to ensure that works, publications, data and memories of feminist communities are properly accessible and managed.

Feminist hacker initiatives are working to provide technical literacy and infrastructure to ensure that mailing lists, pads, wikis, content management systems, social networks and other feminist online services are preserved and protected.

"How to set up a feminist server with a home connection." Guide from la_bekka, the feminist hacklab of Eskalera Karakola (EKKA), a trans-feminist public house - in the city of Madrid.
